Tool details

***FOR RESEARCH USE ONLY**

Name: Anti-human insulin receptor (IR) [18-146]

Alternate name: IR, hIR, INSR

Class: Monoclonal

Conjugate: Unconjugated

Description: Human Insulin Receptor (IR) is a transmembrane tyrosine kinase receptor for insulin. It plays a role in glucose homeostasis by controlling the glucose transport to cells. Malfunction of IR include clinical manifestations such as cancer and diabetes.

Purpose:

Parental cell:

Organism:

Tissue:

Model:

Gender:

Isotype: IgG1

Reactivity: Human

Selectivity:

Host: Mouse

Immunogen: Affinity-purified human insulin receptor

Immunogen UNIPROT ID:

Sequence:

Growth properties:

Production details:

Formulation:

Recommended controls:

Bacterial resistance:

Selectable markers:

Additional notes:

Target details

Target: Human Insulin receptor

Target alternate names:

Target background: Human Insulin Receptor (IR) is a transmembrane tyrosine kinase receptor for insulin. It plays a role in glucose homeostasis by controlling the glucose transport to cells. Malfunction of IR include clinical manifestations such as cancer and diabetes.

Molecular weight: 135 kDa

Ic50:

Applications

Application:

Application notes:

Handling

Format: Liquid

Concentration:

Passage number:

Growth medium:

Temperature:

Atmosphere:

Volume:

Storage medium:

Storage buffer:

Storage conditions: -80° C

Shipping conditions: Shipping at 4° C
