Name: Anti-Human Insulin receptor (IR) [18-40]

Alternate name: IR, hIR, INSR

ancer Tools.org **Class:** Monoclonal Conjugate: Unconjugated **Description:** Human Insulin Receptor (IR) is a transmembrane tyrosine kinase receptor for insulin. It plays a role in glucose homeostasis by controlling the glucose transport to cells. Malfunction of IR include clinical manifestations such as cancer and diabetes. Purpose: Parental cell: Organism: Tissue: Model: Gender: Isotype: IgG1 Reactivity: Human Selectivity: Host: Mouse Immunogen: Affinity-purified human insulin receptor Immunogen UNIPROT ID: Sequence: Growth properties: **Production details:** Formulation: **Recommended controls: Bacterial resistance:** 

Selectable markers:

#### Additional notes:

## **Target details**

Target: Human Insulin receptor

**Target alternate names:** 

**Target background:** Human Insulin Receptor (IR) is a transmembrane tyrosine kinase receptor for insulin. It plays a role in glucose homeostasis by controlling the glucose transport to cells. Malfunction of IR include clinical manifestations such as cancer and diabetes.

Molecular weight: 135 kDa

Ic50:

# **Applications**

**Application: Application notes:** 

# Handling

CancerTools.org Format: Liquid **Concentration:** Passage number: Growth medium: **Temperature:** Atmosphere: Volume: Storage medium: Storage buffer: Storage conditions: Shipping conditions: Shipping at 4° C
