Jancer Tools.org Name: Anti-human insulin receptor (IR) [47-46]

Alternate name: IR, hIR, INSR

Class: Monoclonal

Conjugate: Unconjugated

Description: Human Insulin Receptor (IR) is a transmembrane tyrosine kinase receptor for insulin. It plays a role in glucose homeostasis by controlling the glucose transport to cells. Malfunction of IR include clinical manifestations such as cancer and diabetes.

Purpose: Parental cell: Organism: Tissue: Model: Gender:

Isotype: IgG1 Reactivity: Human

Selectivity: **Host:** Mouse

Immunogen: Affinity-purified human insulin receptor

Immunogen UNIPROT ID:

Sequence:

Growth properties: Production details:

Formulation:

Recommended controls:

Bacterial resistance: Selectable markers:

Additional notes:

Target details

Target: Human Insulin receptor

Target alternate names:

Target background: Human Insulin Receptor (IR) is a transmembrane tyrosine kinase receptor for insulin. It plays a role in glucose homeostasis by controlling the glucose transport to cells. Malfunction of IR include clinical manifestations such as cancer and diabetes.
