Tool details

*FOR RESEARCH USE ONLY

Name: Anti-IFN-Gamma [V27P4G9*F10]

Alternate name: IFG, IFI, IFN gamma, IFN, immune, IFN-gamma, IFNG, IFNG_HUMAN, Immune interferon, Interferon gamma

Class: Monoclonal
Conjugate: Unconjugated
Description: The zebrafish genome contains ten genes that encode class II cytokine-like peptides, of which the two that are related most closely to mammalian interferon gamma (IFN-gamma) were named IFN-gamma1 and IFN-gamma2.
Purpose:
Parental cell:
Organism:
Tissue:
Model:
Gender:
Isotype: Not Known
Reactivity: Salmon ; Rainbow Trout
Selectivity:
Host: Mouse
Immunogen: Peptide sequence - see figure
Immunogen UNIPROT ID:
Sequence:
Growth properties:
Production details:
Formulation:
Recommended controls: WB - recombinant IFNÄ?Â?? and kidney lysates, FACS - isolated

leukocytes, kidney and spleen cells
Bacterial resistance:
Selectable markers:
Additional notes:

Target details

Target: Interferon-gamma (IFNÄ?Â??)

Target alternate names:

Target background: The zebrafish genome contains ten genes that encode class II cytokine-like peptides, of which the two that are related most closely to mammalian interferon gamma (IFN-gamma) were named IFN-gamma1 and IFN-gamma2.

Molecular weight:

Ic50:

Applications

Application: ELISA ; FACS ; WB
Application notes:

Handling

Format: Liquid
Concentration: 0.9-1.1mg/ml
Passage number:
Growth medium:
Temperature:
Atmosphere:
Volume:
Storage medium:
Storage buffer: PBS with 0.02% azide
Storage conditions: -15° C to -25° C
Shipping conditions: Shipping at 4° C
