Tool details

***FOR RESEARCH USE ONLY**

Name: Anti-Ig/BCR [M2B3]

Alternate name:

Class: Monoclonal
Conjugate: Unconjugated
Description: The B-cell receptor (BCR) is composed of immunoglobulin molecules that form a type 1 transmembrane receptor protein usually located on the outer surface of B cells. Through biochemical signalling and by physically acquiring antigens from the immune synapses, the BCR controls the activation of B-cell.
Purpose:
Parental cell:
Organism:
Tissue:
Model:
Gender:
Isotype: IgG1
Reactivity: Human
Selectivity:
Host: Mouse
Immunogen: B cell non-Hodgkin's lymphoma
Immunogen UNIPROT ID:
Sequence:
Growth properties:
Production details:
Formulation:
Recommended controls:
Bacterial resistance:

Selectable markers:
Additional notes:

Target details

Target: Ig/BCR

Target alternate names:

Target background: The B-cell receptor (BCR) is composed of immunoglobulin molecules that form a type 1 transmembrane receptor protein usually located on the outer surface of B cells. Through biochemical signalling and by physically acquiring antigens from the immune synapses, the BCR controls the activation of B-cell.

Molecular weight:

Ic50:

Applications

Application: FACS ; IP
Application notes:

Handling

Format: Liquid
Concentration: 0.9-1.1 mg/ml
Passage number:
Growth medium:
Temperature:
Atmosphere:
Volume:
Storage medium:
Storage buffer: PBS with 0.02% azide
Storage conditions: -15° C to -25° C
Shipping conditions: Shipping at 4° C
