Tool details

*FOR RESEARCH USE ONLY

Name: peQE30-HisNter-TDP1-77 Vector

Alternate name: TARDBP, TAR DNA Binding Protein, TDP-43, TAR DNA-Binding Protein 43, ALS10

ds.org

Class:

Conjugate:

Description: Concentration 1.4mg/ml

Purpose:
Parental cell:
Organism:
Tissue:
Model:
Gender:

Isotype: Reactivity:

Selectivity:

Host:

Immunogen:

Immunogen UNIPROT ID:

Sequence:

Growth properties: Production details:

Formulation:

Recommended controls:

Bacterial resistance:

Selectable markers:

Additional notes: The TAR DNA-binding protein (TDP-43) is a highly conserved heterogeneous

nuclear ribonucleoprotein (hnRNP) that controls the transcription, splicing and RNA stability of specific genes. The protein associates with single-stranded RNA and DNA sequences, and exhibits remarkable specificity for UG/TG dinucleotide repeats. Regulation of the human low-molecular-weight neurofilament (hNFL) by TDP-43 has also been reported to occur through 3â€2 UTR recruitment. TDP-43 is the major protein in inclusions from patients suffering from frontotemporal lobar degeneration (FTLD) with ubiquitin-positive inclusions and amyotrophic lateral sclerosis (ALS).

Target details

Target:	TDP43	N-terminal	domain	1-77
---------	-------	------------	--------	------

Target alternate names:

Target background:

Molecular weight:

Ic50:

Application:
Application notes: Concentration 1.4mg/ml
Handling

Format:

Concentration:

Passage number:

Growth medium:

Temperature:

Atmosphere:

Volume:

Storage medium:

Storage buffer:
