Tool details

***FOR RESEARCH USE ONLY**

Name: pHBx-FLAG vector

Alternate name: nonstructural protein X, protein X, peptide X, pX

Class:

Conjugate:

Description: This vector can be used to express hepatitis B virus HBx protein in a variety of primary and cancer cells. The addition of the FLAG-epitope tag allows for detection in western and immunofluorescent cell-based studies and provides better detection ability than can currently be achieved with commercially available anti-HBx antibodies.

Purpose:

Parental cell:

Organism:

Tissue:

Model:

Gender:

Isotype:

Reactivity:

Selectivity:

Host:

Immunogen:

Immunogen UNIPROT ID:

Sequence:

Growth properties:

Production details:

Formulation:

Recommended controls:

Bacterial resistance:

Selectable markers: Neomycin

Additional notes:

Target details

Target: HBx with FLAG tag at C-terminus

Target alternate names:

Target background:

Molecular weight:

Ic50:

Applications

Application:

Application notes: Multi-functional hepatitis B viral protein, non-structural protein X, that modulates mitochondrial function in host hepatocytes interfering with host anti-viral defenses, promoting viral transcription, and contributing to hepatocellular carcinoma development.

Handling

Format:

Concentration:

Passage number:

Growth medium:

Temperature:

Atmosphere:

Volume:

Storage medium:

Storage buffer:

Storage conditions:

Shipping conditions: Dry Ice
